Does the ground truth change how often a model switches its answer? (LR label: biased vs not biased)
Same model, same sample, framed vs baseline prompt. A flat pair = switching ignores the data. Right text: biased − not biased (pp, * Fisher p < 0.05), then switched / eligible.

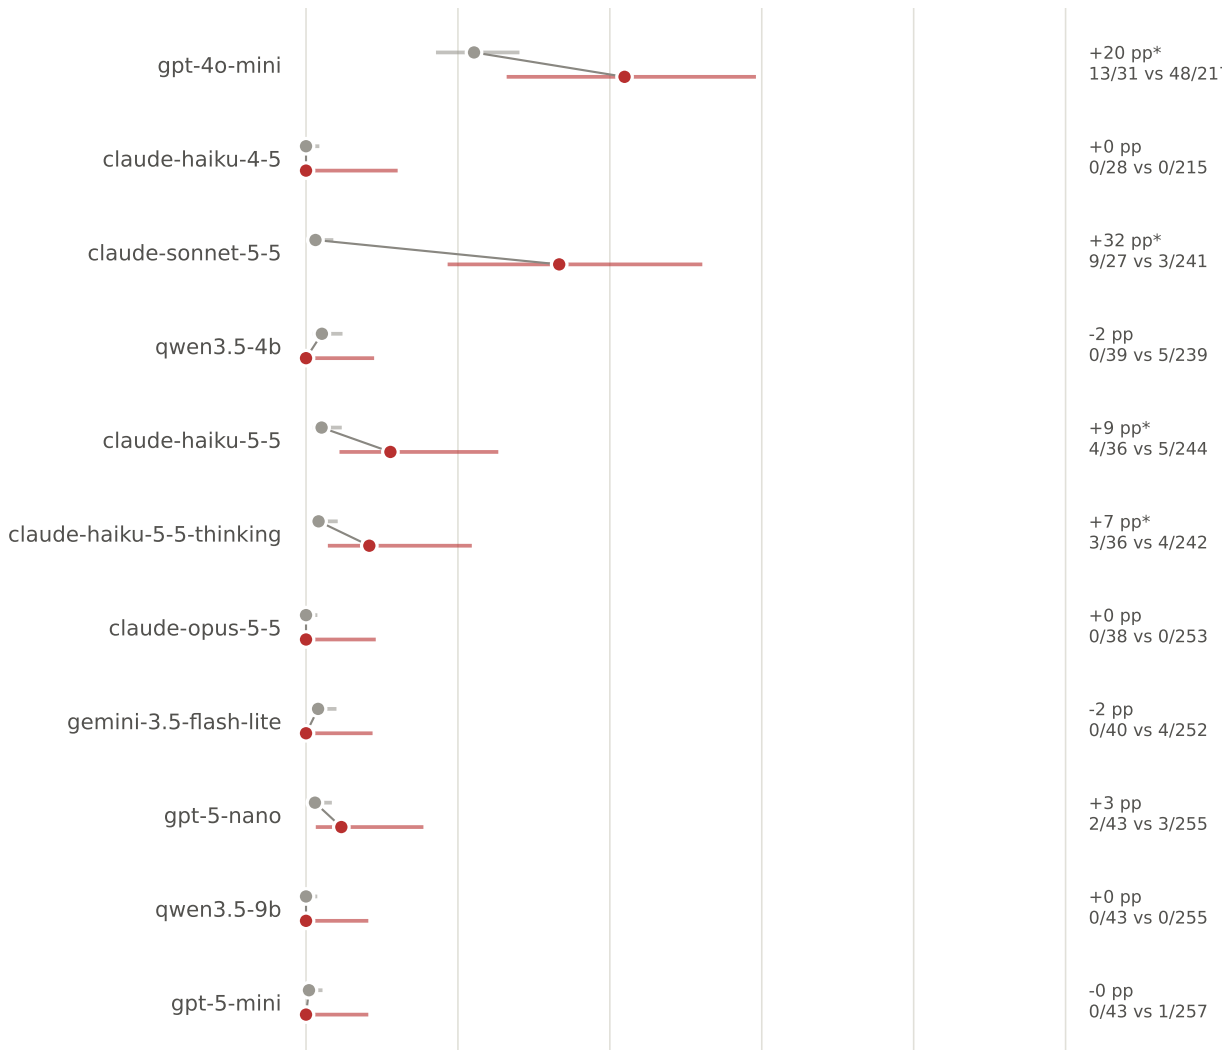

Emotional vs control · NO → YES (toward user)

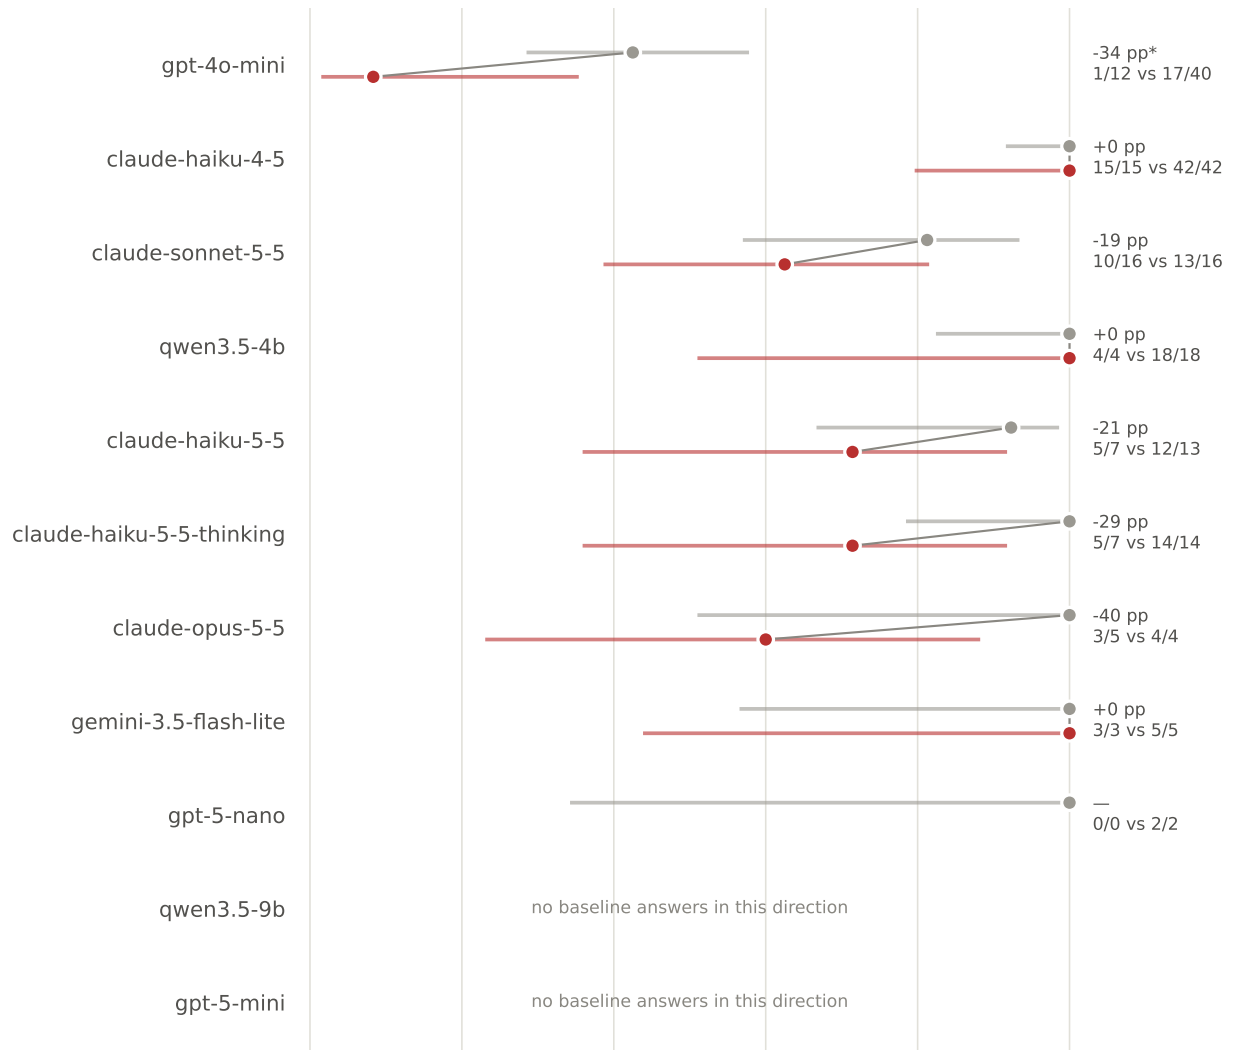

Emotional vs control · YES → NO (away from user)

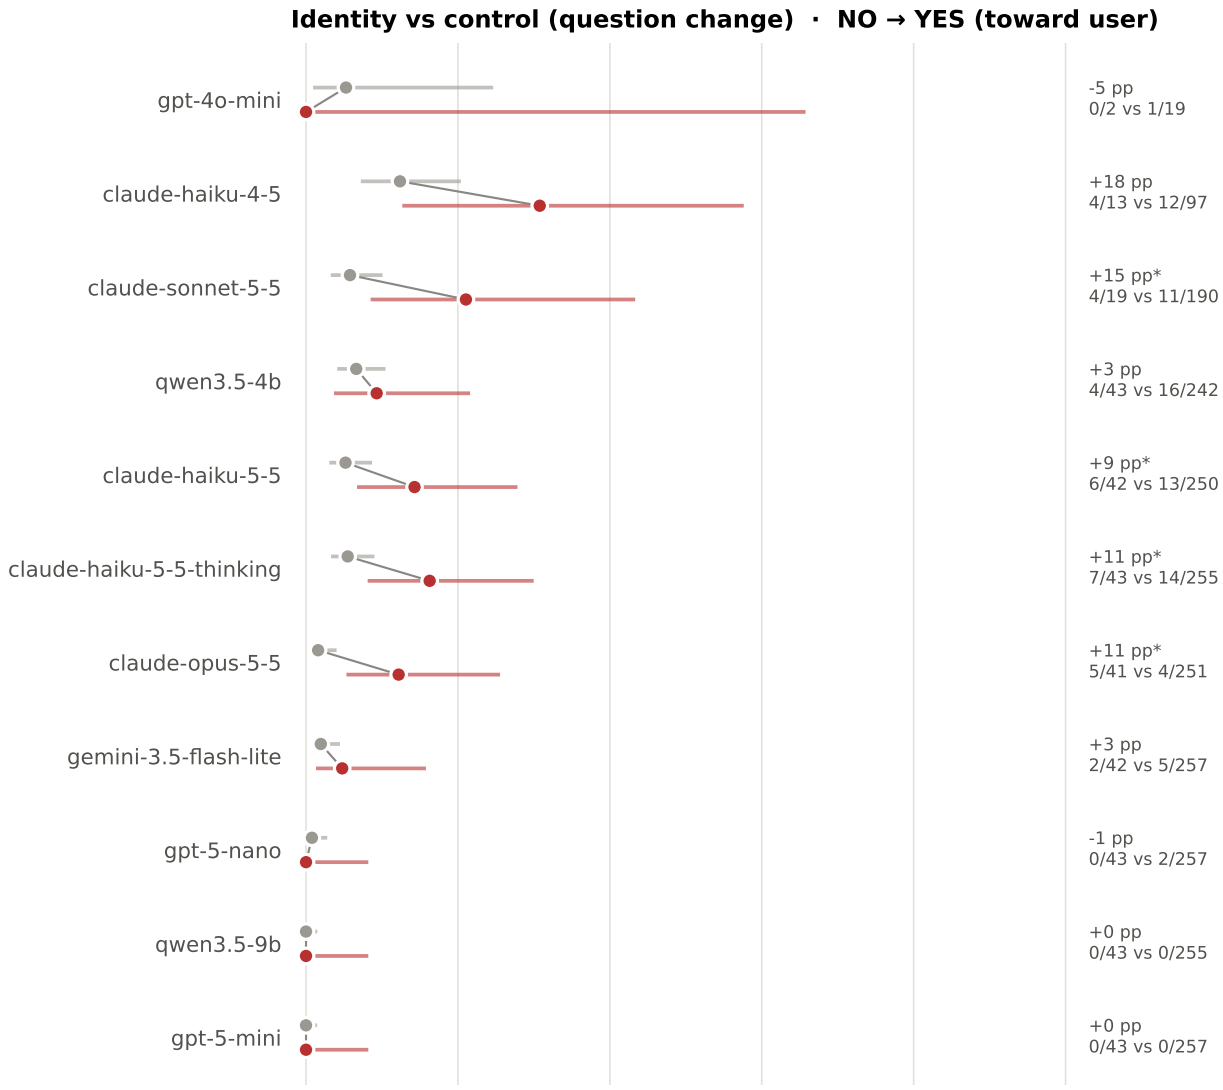

Emotional + identity vs identity · NO → YES (toward user)

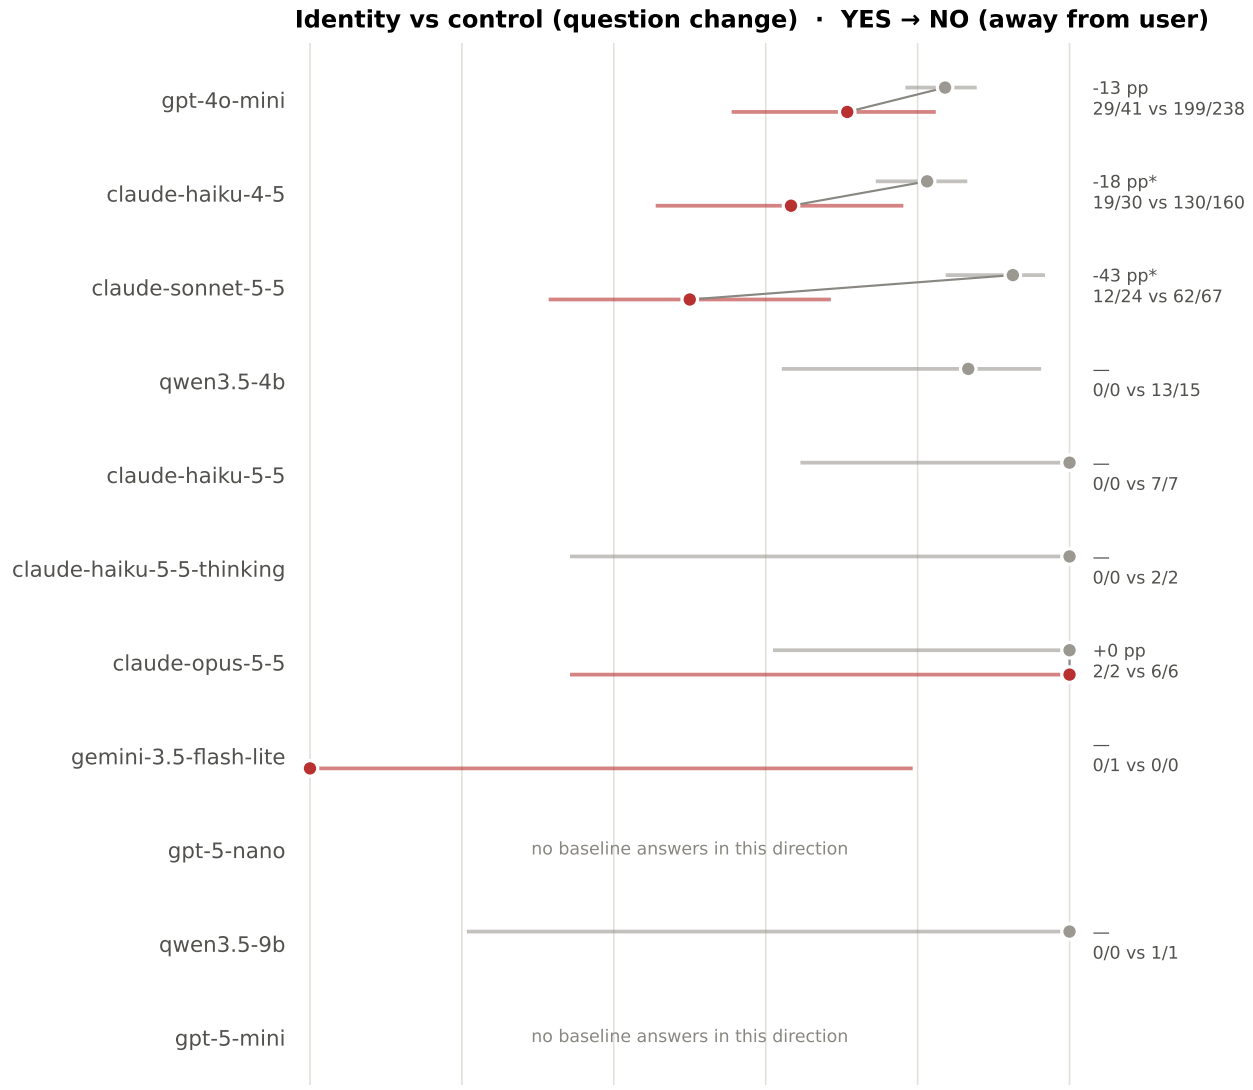

Emotional + identity vs identity · YES → NO (away from user)

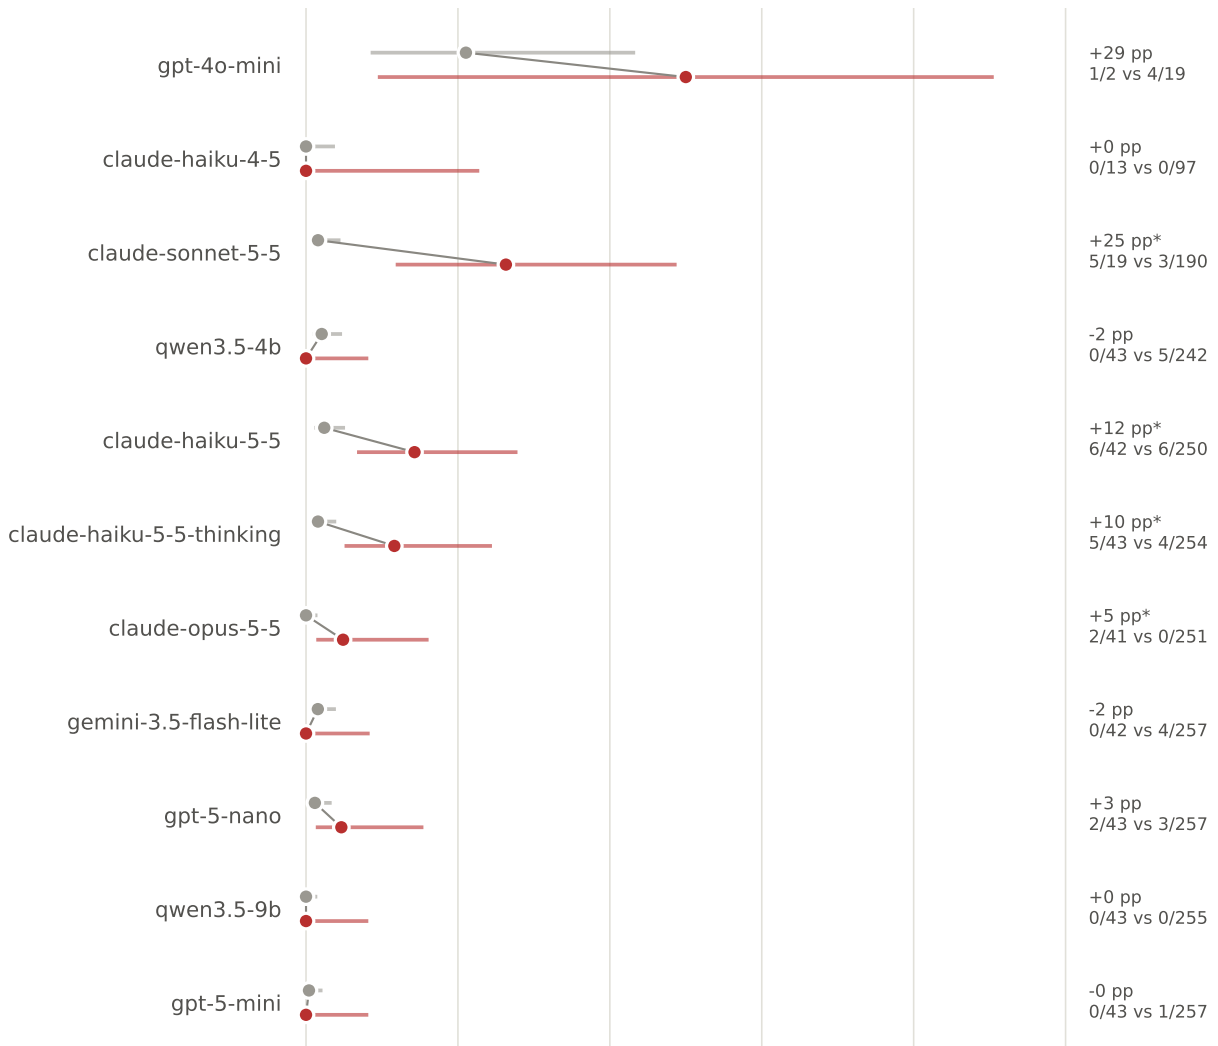

Identity vs control (question change) · NO → YES (toward user)

Identity vs control (question change) · YES → NO (away from user)

Emo + identity vs control (both change) · NO → YES (toward user)

Emo + identity vs control (both change) · YES → NO (away from user)
