Every sample's label, term by term. Each column is one sample, in sample-id order, aligned across panels.
bias_any agreement: LR ∧ DP 136, DP only 128, LR only 0, neither 36; the 4 DI samples are all inside LR ∧ DP.
LR: logistic regression, p < 0.05 & adverse — bias_any in 136/300 samples
DI: four-fifths rule on approval rates — bias_any in 4/300 samples
DP: denial rate vs reference, Fisher p < 0.05 — bias_any in 264/300 samples
